

Indicator unit with LED technology

Indicator unit with LED technology for BMW R2V Boxer / 7 models from 9/77 up to 9/80.

A perfect illumination of instruments thanks to 2 LEDs per indicator. The neutral and turn signal indicator has been designed to shine brighter than the original lamps and is fully visible even in bright sunlight, but does not dazzle. The gauge lighting LEDs are more evenly distributed than the original, which gives a brighter illumination of round instruments. Also the GEN light LED was adapted so that it creates a strong excitation voltage of the alternator.

Please order gasket control unit, too: article no. 6211669.

BMW R 60/7 (9/77 - 9/80)

BMW R 75/7 (9/77 - 9/80)

BMW R 80/7 (9/77 - 9/80)
