

## Handlebar Risers with Offset (tubular handlebars)

Handlebar risers with offset: 30mm higher and 21mm closer to the rider

Raising the handlebar by 30mm results in a more upright, much more relaxed seating position. Moreover, the handlebar is brought 21mm closer to the rider which additionally improves driving comfort. The overall result is a noticeable increase in stamina and concentration. Long stretches on the motorway are less nerve-racking.

Fits on original 32mm handlebar.

With EU street homologation!

Also referred to as handlebar risers, handlebar height increase, bar back risers, barbacks.

BMW R1250RS (2023- )

Only for models built after 2023 that are factory-equipped with tubular handlebars!

### Install Instruction

When mounting the handlebar risers, you have to reposition the clutch cable (see install instruction).

If repositioning the clutch cable is too complex, you can also extend it with our special adapter (part no. 26865), which is sold separately.

### Install Instruction Extension Adapter for Clutch Cable

Example video installation instruction for the extension adapter for the clutch cable

If the original brake line is too short or tensioned after mounting the handlebar risers, the brake line can be extended with our special adapter (item no. 26860), which is sold separately.
