

GS911 wifi OBD II Enthusiast Diagnostic Equipment

The ideal diagnostic tool for workshop and travel! The GS-911 wifi OBD II Enthusiast enables performing endless servicing and diagnostic tasks, deleting the error memories, reading out important data from the various control devices and set the service date on many BMW motorcycles. The testing unit is small and lightweight enough to be taken on all travels without difficulty and is always at the ready in case of breakdowns and error messages even without connection to a 220V mains.

You need only the GS-911 wifi OBD II, a Windows or Mac PC, or a mobile phone or tablet PC to get going (connection via wifi or USB)! The necessary software can be downloaded free of charge or you can access it via web browser and the device can be registered easily via the internet.

The GS-911 wifi OBD II can be used on the road, at home, or in the workshop. The PC software offers even more options than the browser version for mobile devices when on the road!

The Enthusiast version allows work on ten different motorcycles. Further information on how to use the testing device and a host of tips and instructions are available on the manufacturer's site <http://www.hexcode.co.za/>.

The software and user manual is available in German and English language!

Fits for model years since 2017 with EU4 (angular plug).

For use on older motorcycles with a 10-pin round connector (model year before 2017), please use the adapter cable 80217.

Attention: Once the device has been put into operation, it is excluded from being returned!
