

## Clutch Lever Guard

Mandatory for racing, the clutch lever guard is one of our amendments to the racing and performance driven product line-up. Off the race track you will also experience it as a safety plus.

The main body is CNC made of high-end billet aluminum, the protecting piece is made of resistant plastic. Due to that mixture of materials the protectors achieve best performances in stability and flexibility where it is needed. Thanks to off-set spacers it can be adapted to various clutch lever lengths. The downward sloped design leaves enough space to place the hand at the outside of the handlebar.
