

Adjustable brake pedal

This adjustable foot brake lever makes it easier to operate and control the brakes on your motorcycle. It is made of high-quality milled aluminium, is robust and fits perfectly and can be adjusted at a length of 5 cm, which means it can be individually adapted to every foot and every driving style. The stepping surface of the foot brake lever is provided with grooves, which provides better grip and greater stability. Slipping off the brake lever is a thing of the past with this adjustable foot brake lever.

European street homologation is under preparation.

We recommend having the adjustable foot brake lever installed in a specialist workshop.

Install Instruction

Shipment includes brake pedal, mounting material and installation instruction.

An adventure step (FBL.00.127.11000) can be purchased separately as an additional part. This increases the contact surface of the foot brake lever and improves handling when driving off-road. The Adventure step can be adjusted upwards by 5 millimeters, making it easier to reach the brakes even when standing up off-road. It also ensures an incomparable Adventure look on your motorcycle.
