

Upper deflectors

These upper deflectors for BMW R1300GS improve the driving comfort thanks to their shape and position by deflecting the air flow away from the rider's shoulders and arms. Because of their special shape, the deflectors merge harmoniously into the overall design of the motorcycle and are characterized by subtle design, high quality and an easy mounting process. The deflectors are available in different colors so that every rider can choose which version best suits the design of his BMW R1300GS.

Shipment includes a set for the left and right side.

Cannot be used in combination with handle protection 421265320001 (unless the handlebar riser 42915 is used additionally)!

Installation is also possible together with the black original wind deflectors (see image 7).

Installation is only possible if the indicators are integrated in the hand guard (as shown in the pictures)!

Installation is not possible with standard indicators (Enduro package)!
