

Connected Ride Navigator

With the BMW Connected Ride Navigator, all tours and plans are always with you. Planned routes and recordings can be synchronized with the BMW Motorrad app using the BMW ID. The 5.5-inch touch display is easy to read even in direct sunlight. It is operated intuitively using the multi-controller. It always offers up-to-date maps and routes thanks to updates directly on the device and seamless smartphone integration (free, lifetime map updates and free software updates). Map data is available for the whole world. During installation, you will be asked which countries should be installed. A WiFi connection is generally required for installation. The hardware was designed to meet the requirements of motorcyclists - i.e. for the toughest use. It can withstand dust, heavy vibrations, icy cold and extreme heat.

Whether BMW Connected Ride products or your smartphone: The Connected Ride Navigator combines all devices and media applications in one device. For example, when the connection between the motorcycle and the navigator is active, the navigation function, telephony and media are grayed out on the motorcycle's TFT display and clearly displayed on the Connected Ride Navigator's display. Thanks to BMW Motorrad Cloud Integration and your BMW ID, all routes, recordings and plans are synchronized between the navigator and the BMW Connected app.

- Easy and quick attachment of the Connected Ride Navigator in the vehicle-specific holder (special equipment "Navigation preparation")
- Maximum integration into the motorcycle by connecting the Connected Ride Navigator to the on-board network, which is only possible in conjunction with the special equipment "Navigation preparation"
- Convenient operation via the multi-controller
- Data exchange between motorcycle and navigator to use the "My Motorcycle" function (via "My Motorcycle", for example, both status information of the motorcycle and tour information such as distance, speed or lean angle are recorded)
- Export and import of GPX data via the BMW Connected app or via USB-C cable to the PC
- Available languages: German, English, French, Spanish, Italian, Dutch, Japanese, Chinese, Korean, Russian, Polish, Finnish, Czech

Display: 5.5" TFT display with 800 nits of continuous light output (automotive-certified according to BMW Group standard)

Battery type/performance: Lithium polymer battery, 3000 mAh

Protection class: IP 69

SIM card: Micro SIM; compatible up to 4G/LTE (not included)

Charging option and data transfer: USB-C

Fast charging with USB-C up to 2.4 A

State-of-the-art GPS technology

Internal memory: 128 GB

Dimensions: 150x83x19 mm

Weight: 309 g

Color: Black

Scope of delivery:

Connected Ride Navigator

Screwdriver (for installing an optional SIM card)

2 USB-C charging/data cables (USB-A to USB-C and USB-C to USB-C)

The BMW Connected Ride Navigator can only be used in conjunction with the BMW navigation preparation and the BMW Multicontroller!

Can be used for almost all BMW motorcycle models with Multi-Controller (from approx. model year 2014) and special equipment "Navigation device preparation" and can be operated via the Multi-Controller. The models BMW R1200RT, R1250RT, K1600GT, K1600GTL, K1600B and K1600 Grand America are excluded from this!
